

Welded Pipe Clamp Connector

Marine & Shipbuilding & Maintenance

Clamp sets available in
all materials

Metalok360™ is a Canadian own and operated OEM of M-LOK® clamp connectors.

M-LOK® clamp connectors provide significant benefits and are the ideal choice for marine industry and new builds.

M-LOK® is a permanent leak free system that is built to last. Costs associated with ANSI or AMSE flanges are significantly reduced.

M-LOK® Clamp assembly is up to 75% lighter and requires less space compared to standard flanges allowing for closer piping installations.

Torque required to make up a M-LOK® connector can be as low as 30% of that for a ANSI or ASME flange.

In nearly all normal piping applications the M-LOK® connector is stronger than the pipe and most other components which might be connected.

M-LOK® is perfect solution for hydraulics, high pressure gases, oil, utility, and steam applications.

M-LOK® clamp connector will connect your business with success.

M-LOK® Metal-to-Metal
seal ring

Seal rings coatings PTFE and
Molybdenum disulfide
with other coatings available.
