Serverlink

SERVERLINK

Concurrent Remote Access

CONNECT BACK TO OFFICE SERVER WITH iPad, SMARTPHONE OR PCs

Most Affordable Software for to make any Windows Application such as Accounting System/ Inventory / ERP to be Remote Accesible from Multi Branch, Smartphone, Tablets. It also prints to any models of printers on remote site.

ServerLink Remote Access is Terminal Software with Web Access

Simply setup ServerLink into any Windows PC to make the application in it remote accessible over Internet for multi-branch concurrently

ServerLink turn any of your existing application like Accounting System, Stock System, ERP and more to be remotely accessible. Hence, you can remain your existing software application but multi location accessible concurrently. No need to change your current application to achieve multi-location access. Branches users are now connectable to HQ Accounting Server with Remote Desktop Connection or Web Browser without any client software setup to branches PCs.

Web Enabled

Upon ServerLink setup to your Windows Server (or Workgroup PC), it instantly turns the Windows become Web Server. Therefore, all application can be access remotely with common Web Browser like Internet Explorer, FireFox, Safari, Google Chrome & ... No client PC setup is require.

Simple to use, ServerLink WEB is a great option to buy now. More, only one single port is requested to open web session and automatically ServerLink WEB recognize automatically the server address and the port number from the user browser (HTTP or HTTPS). Many features like web print, inside/outside browser, seamless application from the web are included. ServerLink WEB is outstanding any other technology to web-enable existing legacy Windows application.

Application Controls

A fabulous security embedded in ServerLink where a simple operated feature allow administrator to control users to access the permitted application only instead of exploring the entire server. The access rights are based on individual users.

ServerLink embedded Application Control function where administrator allow to Publish any application available in the server for clients to access based on user account. Administrator required to click on user name and check on the published application to assign the permitted application to specified user. Application Control can be assigning by users or by users' group.

Universal Printer

ServerLink never leave out the most demanded feature where user can print to any local printers. Regardless of Web Browser Connected or Portable Client connection, ServerLink allow you to print to local printers without printer driver concern on the Server.

The ServerLink Universal Printer option offers you a great option: freedom to print documents from any place and from any PCs. How does it work? When you select ServerLink Universal Printer, the document to print will automatically be converted into a PDF file and this PDF file will be is automatically pushed to the user workstation. Because ServerLink is based on fast Virtual Channel connections, the Universal Printer is doing an excellent job without having to map any local disk drives or any local printers.
